Project Overview

This project analyzes UNESCO World Heritage Sites through Tableau dashboards. Interactive visualizations help understand regional distribution, heritage categories, endangered sites, and historical trends.

Problem Statement

Tourists struggle to locate sites, researchers deal with scattered data, and UNESCO officers need better visualization for endangered sites and regional monitoring.

Objectives

- Analyze UNESCO data
- Build interactive dashboards
- Visualize categories and regions
- Identify endangered sites
- Forecast trends

Dataset & Tools

Dataset: UNESCO World Heritage Sites

Tool: Tableau Desktop

Visualizations: Maps, Treemap, Forecasting, Pie, Bubble, Bar Charts.

Methodology

Data Collection → Cleaning → Visualization → Dashboard Design → Insight Generation.

Key Insights

Cultural sites dominate; forecasting reveals trends; dashboards simplify analysis.
